THALAPATHIGUGAN K

Full Stack & AI Developer

Puducherry, India · Remote (IST) | +91 63796 57387 | gugantennyson@gmail.com | linkedin.com/in/gugan22

SUMMARY

Software Engineer at Zemuria, architecting and building live SaaS products end to end: mySamantha, Mercemur and InkSigma. I work across the stack, from Next.js, React and TypeScript front ends to Node.js/Express, Django and Go APIs on PostgreSQL and Supabase, through to deployment on Linux servers and Vercel. I build LLM features and code daily with AI tools (Claude Code, Codex), and every change is tested and reviewed before it ships.

SKILLS

Frontend	TypeScript, JavaScript, Next.js, React, HTML, CSS, Angular
Backend	Node.js and Express (TypeScript), Django, Go, REST APIs, OAuth 2.0, SSO, session security
Architecture	System design, multi-tenant SaaS, REST API design, data modelling
Data	PostgreSQL, Supabase, Redis
AI & LLMs	LLM API integration, LangChain, Langflow, Ollama, Gemini API, Groq, Streamlit, Pandas
Deploy & Ops	Linux VPS, Vercel, Render, Cloudflare, domains, DNS, SSL, Resend
SEO & Analytics	On-page SEO, meta tags, JSON-LD, sitemaps, page speed, Google Analytics
Workflow	Git, GitHub, pull requests, code review, testing; Claude Code, Codex, OpenCode

EXPERIENCE

Zemuria · **Software Engineer** May 2025 – Present

Software Engineer (2026 – present) · SDE Intern (Mar 2026) · Trainee (May 2025 – Mar 2026)

- **mySamantha:** Architect and full-stack developer. Designed the system architecture, then built across it: frontend pages and components, Django backend APIs, PostgreSQL and Supabase data models, integrations, bug fixes and production releases.
- **Mercemur:** Architect and full-stack developer. Designed the system architecture, then built across it: storefront and dashboard frontend, Go backend services, PostgreSQL and Supabase data, integrations and production deploys.
- **InkSigma:** Developed v2 of the blog engine with the product team: a multi-tenant platform where each tenant runs its own blog, built on Next.js, Express and PostgreSQL.
- Built and maintain the company websites **senatio.com** and **llmcontrols.ai** in Next.js and React, with about 150 commits on each.
- Implement sign-in and security features: SSO, OAuth logins, secure sessions and idle sign-out.
- Take features from code to production: Linux VPS and Vercel deploys, domains, DNS, SSL and Google Analytics setup.
- Work in small branches with pull requests and code review, using AI coding agents to plan and write code and testing every change before merge.

NTTF, Bangalore · **AI/ML Trainee** Jan 2025 – Apr 2025

- Trained machine learning models and applied deep learning and computer vision techniques.
- Built Streamlit web apps on top of the models; handled data cleaning, preprocessing and feature engineering.

PROJECTS

AI Data Analyst · Python, LangChain, Groq API, Streamlit, Pandas, Matplotlib, Seaborn
Upload CSV, Excel or other files and ask questions in plain English; the LLM writes the analysis and returns insights and charts.

Chat with PDF · Python, LangChain, PyPDF2, Streamlit, SMTP
Chatbot that parses uploaded PDFs and answers questions about their content using LangChain retrieval.

Gemini AI Chatbot · Python, Gemini API, Streamlit
Conversational assistant built on the Gemini API with a Streamlit chat interface.

EDUCATION

B.Tech, Information Technology · RAAK College of Engineering and Technology 2021 – 2024 · CGPA 7.5/10

Diploma, Computer Science Engineering · Hayagriva Polytechnic College 2018 – 2021 · 79.9%

CERTIFICATIONS

Microsoft Certified: Azure AI Fundamentals · Google UX Design · Google IT Automation with Python · Data Analytics, NoviTech R&D · Angular Program, Askan Technologies
